

Hardware Connections

1. Use HDMI cables to connect the displays to the controller's outputs.

2. Connect the input source to the controller's input.

3. Connect a PC with the installed control software to the controller's USB port.

Software Setup

1. Install the software and drivers by double clicking "RCSCtrl_2.8.x"

2. Open the software and right click in the Capture Region, which is on the right half of the software interface, and then set the input resolution.

3. Select the monitors used on your video wall from the Monitors Settings on the toolbar.

4. Position and rotate the displays in the Physical Layout region, which is the region on the left half of the software interface, to get the desired layout. Click Apply.

FAQ

1. Why can't I find my monitor in the monitors list?
 - a. Our monitors list includes most well-known monitor brands. If your video wall's monitors are not in the list, you can manually input its parameters into the Monitor Properties section. Click Save and your monitor will now appear in the list.

2. Why didn't anything happen after I clicked the Apply button?
 - a. Check that the USB cable between the PC and the controller are securely connected.
 - b. Ensure that the cables are securely connected between the controller and the monitors.
3. My monitors are static or blurred. What happened?

In this case, one of the following should solve this problem.

 - a. Ensure that all input and output cables and their connections are secure.
 - b. If you are using adapters, splitters or are cascading units together, ensure that all connections are secure.
 - c. Confirm that the input has the correct EDID and make sure the input resolution is the same with that of the controller.
 - d. Make sure the input source is operating properly. Check the input's status on the software by clicking the Refresh button in the toolbar. Information about the input source's status will appear in the System Log at the bottom of the software interface.
 - e. Click the Test button on the toolbar and change the colors to make sure the monitors and the outputs are operating normally.
