The PT1Ci is a security tool for datasensitive HDMI installations (military, banking, and such). It is an EDID buffer and storage device for HDMI signals that prevents reverse communication of the DDC signal. The device blocks HDCP and prevents EDID passthrough. The PT1Ci lets you read and capture an EDID securely and present it to sources for compatibility with the display. The device has no effect on the audio and video streams, and therefore, supports 4K UHD video
