

Audio Technica / ATW-R1440

SYSTEM 20 PRO RECEIVER 2.4 GHZ

With the System 10 PRO rack-mount receiver, Audio-Technica raised the bar for functionality and ease in 2.4 GHz wireless microphone systems. They've gone one step further with the System 20 PRO, a plug-and-play, self-managing 2.4 GHz system that can accommodate up to 20 channels and produces consistently good audio no matter where it is installed. The technology solves many difficulties associated with traditional wireless microphones, including frequency synchronization, intricate intermodulation calculations, and remote antenna cabling. It is designed for hassle-free deployment.

- Half-rack chassis capable of receiving up to four transmitters
- Each receiver channel can be paired with up to four transmitters, allowing users to instantly switch between different transmitter configurations
- Switch between Standard (10 channels) and HD (20 channels) modes
- Receiver units can be docked in the chassis or mounted remotely (up to 328 feet away) via Ethernet cable for added versatility
- Up to five chassis can be linked and used simultaneously
- Monitor transmitter status, audio level, remaining battery time, and other information in A-T Wireless Manager
- Auto-lock function prevents unintended operations
